Education

University of Chicago **Expected Dec 2027**
M.S. in Computer Science (Artificial Intelligence) *Chicago, IL*

- **Coursework:** Algorithms, Database Systems, Python Programming

University of International Business and Economics **Sep 2022 – Jun 2026**
B.Eng. in Artificial Intelligence *Beijing, China*

- **Honors:** China National Scholarship (top 1%), MCM Honorable Mention, Challenge Cup Gold Award, 3× Provincial Second Prizes
- **Coursework:** Data Structures, Operating Systems, Computer Networks, Machine Learning, Deep Learning, NLP

Experience

Baidu Health **Dec 2025 – Apr 2026**
AI Product Engineering Intern *Beijing, China*

- Built the DeepResearch agent powering the retrieval mode of **Youyi Assistant**, Baidu's evidence-based medical QA platform for clinicians ("China's OpenEvidence"), taking it from a Claude Skill prototype to AppBuilder production for the April 2026 launch; proposed the architecture adopted by the team.
- Designed a multi-stage **agentic RAG** pipeline (decompose → retrieve → evaluate → generate) with parallel retrieval over drug-label, guideline, and literature indexes, an LLM sufficiency check triggering re-retrieval on ∼18% of queries, and **patient-context grounding** over private health records.
- Cut latency from **∼2 min to ∼10 s time-to-first-token** via parallel retrieval, streamed reasoning, leaner query decomposition, and higher index quality (OCR-based PDF parsing, parent–child chunking).
- Co-built with physicians a **1,000-query expert-annotated benchmark** (human review + LLM-as-judge) that gated model and pipeline releases; shipped 7 medical skills for the task-mode agent.

Zhipu AI (Z.ai) **Feb 2025 – May 2025**
Data Engineering Intern, AutoGLM Team *Beijing, China*

- Built data pipelines producing GUI-agent trajectory and **SFT data** for **AutoGLM**, Zhipu's phone- and web-operating agent, processing 180K+ trajectories (∼2M steps) across 60+ apps.
- Synthesized ∼40K instructions from ∼2.5K seed tasks (GLM-4-Plus) and filtered ∼20% low-quality data with a VLM judge.
- Designed data mixtures for 10+ ablations on a 9B model with a ∼600-task eval set; upsampling long-horizon, cross-app trajectories raised multi-step task success by **4+ points** with no single-app regression.

Research & Technical Leadership

Legal AI Group, University of International Business and Economics **Jun 2026 – Present**
Research Assistant, Advisor: Prof. Weijie Yu *Beijing, China*

Model Editing for Guilty Bias in Legal Judgment Prediction

- Researching model-editing methods that correct **guilty bias** in LLM legal judgment, where a guilty verdict persists after a legally decisive fact changes, while preserving correct verdicts on closely matched cases.

LexAsk: Proactive-Inquiry Legal Agent — *Ongoing*

- Designing a legal-element sufficiency scorer that decides when to ask, what to ask, and when to stop, and training it into Qwen3-8B via SFT and **multi-turn GRPO** against simulated clients with deterministic, hard-to-game rewards.

AI for Science, Peking Union Medical College Hospital (PUMCH) **Feb 2024 – Present**
Research Collaborator → Technical Lead, BioFlow (Sep 2025 – Present) *Beijing, China*

- One of two technical leads for **BioFlow**, PUMCH's internal AI-for-science platform (40-person team, ∼50 researchers, 30+ papers and projects); led the data-analysis and skills modules (∼20 engineers), built on my earlier automated analysis workflow.
- Designed a **DAG workflow system** compiling user-built graphs of 15+ registry-defined nodes into Nextflow metagenomic pipelines, with content-addressed caching, checkpointed resume, and immutable execution snapshots for reproducibility.
- Built **LLM guardrails** for a local Qwen3-14B assistant (whitelist-only, user-confirmed edits; sandboxed repair capped at two rounds) and a provenance-tracked figure catalog (20+ figure types) so generated papers cite only computed results.
- Built **NutriWise**, a RAG-based pediatric nutrition textbook serving **800+ students**; beat DeepSeek and Kimi on child-friendliness (4.9 vs. ≤3.3/5) and traceability (4.8 vs. ≤2.2/5) in blind evaluation (GitHub).

Technical Skills

Languages: Python, C++, Java, SQL, TypeScript, JavaScript
LLM & Agents: RAG, agentic workflows, LangChain, LangGraph, MCP, vLLM, vector search (FAISS), LLM evaluation
ML: PyTorch, Hugging Face Transformers, SFT, LoRA/PEFT, RL (GRPO), verl, LLaMA-Factory, model editing, scikit-learn
Infrastructure: FastAPI, Flask, React, Nextflow, Docker, AWS, Redis, MySQL, PySpark, Git, Linux, CI/CD
